PROFESSIONAL SUMMARY

Detail-oriented 2nd-year B.Tech Computer Science and Business Systems (CSBS) student with a strong foundation in Python, Java, and full-stack web development. Experienced in designing interactive web applications, automated assistants, and CRUD-based management systems using modern frontend and backend technologies. Adept at analytical problem-solving and eager to apply software development skills to real-world challenges through technical internships.

EDUCATION

VSB Engineering College, Karur, Tamil Nadu **2nd Year (Present)**
Bachelor of Technology in Computer Science and Business Systems (CSBS) | CGPA: 6.55

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C, HTML5, CSS3
Web Technologies: HTML5, CSS3, JavaScript, Web APIs
Databases: MySQL, SQLite
Frameworks & Libraries: Tkinter, SpeechRecognition, Pytsx3, Pygame
Tools & Platforms: Git, GitHub, VS Code

PROJECTS

Ultron – AI Desktop Assistant / *Python, SpeechRecognition, Pytsx3, Web APIs* [GitHub Repo](#)

- Built a voice-activated AI assistant in Python to automate daily desktop workflows and enhance user interaction.
- Integrated speech recognition and text-to-speech synthesis modules to execute voice commands for web searches and system tasks.
- Implemented modular Python scripts to parse real-time voice input and handle API-driven system responses efficiently.

E-Commerce Web Platform / *JavaScript, HTML5, CSS3* [GitHub Repo](#)

- Developed an interactive front-end e-commerce interface supporting product listings, user browsing, and cart management.
- Structured responsive webpage layouts using clean HTML5 and CSS3 for consistent rendering across devices.
- Programmed dynamic client-side interactivity using vanilla JavaScript to handle user actions and state updates seamlessly.

Online Voting System / *HTML5, CSS3, JavaScript* [GitHub Repo](#)

- Designed a web-based voting portal interface enabling users to view candidates and submit votes securely online.
- Built responsive UI components with clean visual hierarchy using custom CSS styling and structured HTML forms.
- Handled vote capture and client-side form validation mechanisms using custom JavaScript logic.

CRUD Student Management System / *Java, MySQL, JDBC* [GitHub Repo](#)

- Created a Java database management application implementing core Create, Read, Update, and Delete (CRUD) operations.
- Connected backend Java business logic with a relational MySQL database utilizing Java Database Connectivity (JDBC).
- Structured database schemas and optimized SQL queries to manage student data records reliably.

Library Management System / *Python, Tkinter, SQLite* [GitHub Repo](#)

- Developed a GUI-driven desktop library application to manage book inventories, issue tracking, and member records.
- Implemented a graphical user interface utilizing Python's Tkinter library for clear user navigation and data entry.
- Managed local data persistence and query operations using an embedded SQLite database.

CERTIFICATIONS

- Python Foundation Certification** – Python Institute / Authorized Provider
- Certification Placeholder 1** – [Issuing Organization Name]
- Certification Placeholder 2** – [Issuing Organization Name]

HACKATHONS & TECHNICAL EVENTS

- **Participant**, [Event / Hackathon Name] – [Organizing College / Institution], [Year]
- **Attendee**, [Workshop / Technical Seminar Name] – VSB Engineering College, Karur

ACHIEVEMENTS

- **Academic & Project Achievement Placeholder** – [Add any verifiable academic or competitive programming accomplishment]

SOFT SKILLS

Problem Solving | Teamwork | Communication | Adaptability | Quick Learning | Time Management
